World Simmental
Fleckvieh Federation

www.wsff.info

European
Simmental Federation

www.evf-esf.info

Dear Simmental-Fleckvieh Friends,

passed positively also for the joint European "non-holstein" project for genomic selection: Gene2Farm, where the ESF is participating also. The "kick-off" for the new project is planed for February 2012.

The WSFF&ESF will also participate in the ICAR meeting for world breed federations during the next ICAR congress in Cork, Ireland in May/June 2012.

Under the coordination of the ESF the further steps on type classification of the dual-purpose animals has been completed. A new system of 100-point scale definition of the overall traits – "Fleckscore" was developed and introduced at the end of 2011.

In 2011 the new concept of joint meetings of the WSFF and ESF was realized - the 29th Congress of the European Simmental Federation together with the World Simmental-Fleckvieh Federation Council met in Udine, Italy. The host Italian Association A.N.A.P.R.I. did a tremendous job in organizing this excellent

event in a fantastic venue. We would like to send our sincere thanks once more to the president Franco Moras and his crew from the Italian Association.

The new coordination of the Council meetings between WSFF and ESF will continue next year within the World Simmental-Fleckvieh Congress being held in September in Germany at the same time and place. We are all waiting with pleasant anticipation for the meetings in Landshut and Munich.

We would like to express our very best wishes for the coming year to all of you and your families. To all the Simmental-Fleckvieh breeders - We wish you a successful and prosperous 2012!

Yours sincerely

Bruce Holmquist
President
World Simmental
Fleckvieh Federation

Josef Kučera
President
European
Simmental Federation

Merry Christmas
and a
Happy New Year!

PF 2012

on behalf of the WSFF & ESF

WSFF Council Meeting in Italy - ESF Congress in Italy

4. - 7. 5. 2011

Fleckvieh breed in Italy

- 58.000 dual purpose cows in 5.000 farms registered.
- Fleckvieh is kept mainly in following regions: Trentino-Alto Adige, Sicily, Piemont, Campania (Naples), Lombardy and Friuli Venezia Giulia.
- Milkperformance: 6.530 kg Milk, 3,88 % fat, 3,44 % protein

Farm visits

- Azienda Agricola Bianchini F.Lli
 - 70 hectares of farmland,
 - 160 Fleckvieh cattle, 76 dairy cows,
 - milk production: 7219 kg milk - fat 3.90% - 3.47% protein.
- Azienda Agricola Mariani-Volpare:
 - total area of 610 ha,
 - 730 Fleckvieh animals,

- research and experimental farm where training courses for farmers and veterinarians are offered.

Our thanks belong to the Italian National Association A.N.A.P.R.I. for the hospitality and good organization.

Presentations from the meeting:
<http://www.wsff.info/clanky-wsff-council-meeting-2011-in-italy.html>

WSFV Ausschusssitzung in Italien, Udine - EVF Kongress in Italien, Udine

4. - 7. 5. 2011

Fleckviehzucht in Italien

- 58.000 Kühe in der Doppelnutzung in 5.000 Herdebetrieben registriert.
- Fleckvieh wird vor allem in den Regionen Trentino-Südtirol, Sizilien, Piemont, Kampanien (Neapel), Lombardei und Friaul Julisch Venetien gehalten.
- Das Leistungsniveau liegt bei 6.530 kg Milch bei 3,88% Fett und 3,44% Eiweiß.

Betriebsbesichtigungen

- Betrieb der Gebrüder Bianchini:
 - 70 ha landwirtschaftliche Nutzfläche.
 - 160 Fleckviehtiere, davon 76 Milchkühe,
 - Leistungsniveau von 7.219 kg Milch - 3,90% Fett – 3,47% Eiweiß.
- Betrieb Marianis-Volpare:
 - Gesamtfläche von 610 ha,
 - 730 Fleckviehtiere,

- Es handelt sich um einen regional geförderten Betrieb, in dem Forschungs- und Versuchseinheiten und Fortbildungskurse für Landwirte und Tierärzte angeboten werden.

Der Dank gilt dem italienischen Nationalverband für die Gastfreundschaft und die gute Organisation.

Official genomic breeding values in Austria and Germany!

There have been the official genomically optimized breeding values available in Austria and Germany since August 2011!

Genomische Zuchtwertschätzung Fleckvieh: Start in offizielle Phase

Nach einer inoffiziellen Testphase seit Dezember 2010 haben die genetischen Zuchtwerte mit der Veröffentlichung 09. August 2011 den Status „offizieller Zuchtwert“ erhalten. Nach Beschluss des Beratenden Ausschusses Zuchtwertschätzung der Länder Bayern, Baden-Württemberg und Österreich vom 28.06.2011 und der ICAR-Anerkennung des genetischen Zuchtwertschätzverfahrens werden die genetisch optimierten Zuchtwerte zur Zuchtwertschätzung August 2011 als offizielle Zuchtwerte veröffentlicht.

temberg und Österreich vom 28.06.2011 und der ICAR-Anerkennung des genetischen Zuchtwertschätzverfahrens werden die genetisch optimierten Zuchtwerte zur Zuchtwertschätzung August 2011 als offizielle Zuchtwerte veröffentlicht.

The Federal Fleckvieh Show in 2011 (Bundesfleckviehschau 2011) in Austria

Some of the most valuable breeding cattle in Austria were presented at the Agricultural Fair in Ried to an enthusiastic audience from 7 to 10 September. The show conceived as a breeding program show event, the first in the era of genomic selection, could set new standards with its quality and innovation. Judge Dr. Alfred Weidele pointed to the perfect exterior of the exhibited animals, especially on the superior udder quality and gave the show simply the title of „world class“.

In total, the eleven member associations AGÖF (Fleckvieh-Austria) exhibited 171 breeding cattle, and especially on Thursday, the day of judging, the animal arena was packed to the rafters, including experts and buyers from 21 countries.

Check www.fleckvieh.at for more information.

Das war die Bundesfleckviehschau 2011 in Österreich

Vom 7. bis 10. September wurde im Rahmen der Rieder Landwirtschaftsmesse ein Teil der wertvollsten Zuchtrinder Österreichs einem begeisterten Publikum präsentiert. Die wiederum als echte Zuchtprogrammschau konzipierte Veranstaltung, die erste im Zeitalter der Genomselektion, konnte mit Qualität und Innovation neue Maßstäbe setzen. Preisrichter Dr. Alfred Weidele verwies auf das perfekte Exterieur der ausgestellten Tiere, ganz besonders auf die überragende Euterqualität und verlieh der Schau schlicht und einfach das Prädikat „Weltklasse“.

Insgesamt wurden von den elf Mitgliedsverbänden der AGÖF (Fleckvieh-Austria) 171 Zuchtrinder ausgestellt und besonders am Donnerstag, dem Tag der Wettbewerbe, war die Tierarena bis auf den letzten Platz gefüllt, darunter Experten und Kaufinteressenten aus 21 Ländern.

\$375,000 Investment in Canada Beef Research 23.11.2011

Today, at Canadian Western Agribition, Saskatchewan Agriculture Minister Bob Bjornerud announced \$375,000 in funding for a beef genomics research project led by the Canadian Simmental Association.

“Research is an important part of our agriculture industry and essential to ensuring our farmers and ranchers remain at the forefront of production throughout the world,” Bjornerud said. “This funding will improve the competitiveness of our beef industry and help producers continue to provide safe, high-quality products to feed a growing world population.”

The Enhancing Canadian Beef Production through Genomic Innovation project aims to develop genetic selection tools that will allow producers to better identify and utilize superior genetics to improve the quality of their product. The project will initially identify superior genetics within Simmental-influenced cattle to improve carcass compositions and beef quality. The tools developed by this project are not limited to Simmental breeds and will benefit the entire cattle industry.

The project has also received funding from the Alberta Livestock and Meat Agency as well as Agriculture and Agri-Food Canada.

“This generous contribution from the Saskatchewan Ministry of Agriculture, the Canadian Simmental Association, and our project partners allows us to continue to work to ensure Canada’s seedstock sector is at the forefront of genetic research and ultimately global competitiveness,” past Canadian Simmental Association president Rick McIntyre said. “This project will assist all Canadian cattle producers in our ongoing efforts to supply premium beef to both the domestic and international marketplaces.”

Provincial funding was provided through the Agriculture Development Fund (ADF). ADF provides funding to help institutions, companies and industry organizations conduct research, development and value-added activities that will benefit Saskatchewan farmers and ranchers. In 2011, the Saskatchewan Ministry of Agriculture committed \$14.5 million for 71 ADF projects.

UPCOMING EVENTS

Announcing

Herewith we want to announce the
4th International Fleckvieh Simmental Beef Show from January, 20 to 22, 2012

which takes place during the International Green Week (IGW) in Berlin.

About 100 cattle are going into competition on Saturday, January 21, 2011 at 2.00 p.m. in the "Großen Ring" in hall 25. In collaboration with the German Simmental Breeding Organization (VDSI) there will be organized a forum "Fleckvieh Simmental Beef in Europe" on Sunday, January 22, 2012 from 10.00 a.m. to 1.00 p.m. in the ICC at the exhibition center Berlin. For this we ask all working group members and breeding organizations with interest for collaboration

for a short information about the status quo of the breeding Beef Simmental per country.

Because of organizational reasons please make your arrangement of hotel accommodation by yourself, for example via www.booking.com.

Vorankündigung

Hiermit möchten wir auf die im Rahmen der Internationalen Grünen Woche (IGW) in Berlin stattfindende

4. Bundesschau Fleckvieh Simmental Fleischnutzung vom 20. bis 22. Januar 2012

hinweisen und ganz herzlich einladen. Rund 100 Schautiere werden am Samstag, 21.1.2012 um 14.00 Uhr im Großen

Ring der Halle 25 zum Wettbewerb antreten.

In Zusammenarbeit mit dem Verband Deutscher Simmentalschäfer e.V. (VDSI) wird am Sonntag, den 22. Januar 2012 von 10.00 – 13.00 Uhr ein EVF Forum zur Thematik „Fleckvieh Simmental Beef in Europa“ auf dem Messegelände Berlin (ICC) organisiert. Hierzu bitten wir alle Mitglieder und Zuchtorientationen, die Interesse an der Mitarbeit haben, um eine Kurzinformation über den aktuellen Stand der Rasse in der Zuchtrichtung Fleischnutzung pro Zuchtgebiet bzw. Land.

Aus organisatorischen Gründen bitten wir um eine eigenständige Hotelbuchung.

(Zum Beispiel unter www.booking.com)

19. World Simmental Fleckvieh Congress

München / Landshut 19.–25. September 2012

www.wsffcongress2012.de

Liebe Fleckviehzüchter!

Erstmals nach 24 Jahren findet wieder der Kongress der Welt Simmental Fleckvieh Vereinigung in Deutschland statt.

Mit einem umfangreichen Hauptprogramm und einem vorwiegend auf Mutterkuhhaltung ausgerichteten Vorprogramm soll die ganze Palette der Fleckviehzucht in Bayern, Baden-Württemberg und in den neuen Bundesländern in wenigen Tagen abgedeckt werden. Zu diesem herausragenden Ereignis möchten wir alle Züchter, Freunde und Interessenten der Rasse Simmental Fleckvieh aus aller Welt recht herzlich einladen.

Franz-Xaver Stürzer
VORSITZENDER ASR

Dr. Georg Röhrmoser
GESCHÄFTSFÜHRER ASR

HAUPTPROGRAMM

Mi	19.9.	Landshut	Anreise, Begrüßungsabend
Do	20.9.	Nordbayern	Betriebsbesichtigungen
		Neustadt/Aisch	Bullenparade etc.
		Rothenburg/Tauber	Stadtführung, Weinprobe
Fr	21.9.	Landshut	Ausschusssitzungen im Hotel Kaiserhof (gesonderte Einladung)
		Regensburg	Begleitprogramm: Betriebe, Schiffahrt etc.
		Mühldorf	Nachzuchtschau, Züchterabend
Sa	22.9.	Landshut	Mitgliederversammlung in den Bernlochner Stadtsälen Stadtführung
			Galaabend mit Ministerempfang
So	23.9.	Baden-Württemberg	Tierschau in Ilshofen mit Richtwettbewerb und Demogruppe Fleckvieh-Fleisch, Züchterabend
			Begleitprogramm mit Besichtigungen
Mo	24.9.	München	Landestierschau (ZLF), Oktoberfestbesuch
Di	25.9.	Oberbayern	Besichtigung Landesanstalt für Landwirtschaft in Grub, Exkursionen (Chiemsee, Wendelstein, usw.)

VORPROGRAMM

So	16.9.	Dresden	Ankunft
Mo	17.9.	Dresden	Stadtbummel
		Sachsen	Betriebsbesichtigungen
Di	18.9.	Sachsen-Anhalt	Betriebsbesichtigungen und Exkursionen
		Thüringen	Tierschau in Laasdorf mit Züchterabend
Mi	19.9.	Thüringen	Betriebsbesichtigung und Fahrt nach Landshut

JUNGZÜCHTERPROGRAMM

Auch die Jungzüchter sind herzlich eingeladen am Kongress teilzunehmen. Es werden spezielle Programmmpunkte, wie z.B. am Freitag, 21.09. in Mühldorf ein Jungzüchter-wettbewerb mit Jungzüchterparty oder am Samstag, 22.09. ein separates Exkursions-programm in Oberbayern, angeboten.

PROGRAMMÄNDERUNGEN VORBEHALTEN

Dear Fleckvieh breeders!
The World Simmental Fleckvieh Federation Congress takes place in Germany for the first time after 24 years!

With a comprehensive main programme and a pre congress tour which concentrates primarily on suckler cow husbandry, the full spectrum of Fleckvieh breeding in Bavaria, Baden-Württemberg and the former East German states will be covered in just a few days. We would like to extend a warm invitation to this outstanding event to all Simmental Fleckvieh breeders, friends and other interested persons around the world.

Franz-Xaver Stürzer
CHAIRMAN OF ASR

Dr. Georg Röhrmoser
DIRECTOR

MAIN PROGRAMME

Weds.	19.9.	Landshut	Arrival, welcome evening
Thurs.	20.9.	North Bavaria	Farm visits
		Neustadt/Aisch	Bull parade etc.
		Rothenburg/Tauber	Guided tour through Rothenburg, wine tasting
Fri.	21.9.	Landshut	Council Meeting at Hotel Kaiserhof (by invitation)
		Regensburg	Supporting programme: farms, boat trip etc.
		Mühldorf	Progeny show, breeders' evening
Sat.	22.9.	Landshut	General Assembly in the Bernlochner Stadtsäle Guided tour through Landshut
			Gala evening with Minister's reception
Sun.	23.9.	Baden-Württemberg	Cattle show in Ilshofen with judging contest and Fleckvieh beef demo group, breeders' evening
			Supporting programme with visits
Mon.	24.9.	Munich	Bavarian Central Agricultural Festival (ZLF), visit of the Oktoberfest
Tues.	25.9.	Upper Bavaria	Visit of the "Landesanstalt für Landwirtschaft" in Grub, field trips (Chiemsee, Wendelstein, etc.)

PRE CONGRESS TOUR – EASTERN GERMANY

Sun.	16.9.	Dresden	Arrival
Mon.	17.9.	Dresden	Guided tour
		Saxony	Farm visits
Tues.	18.9.	Saxony-Anhalt	Farm visits and field trips
		Thuringia	Cattle show in Laasdorf with breeders' evening
Weds.	19.9.	Thuringia	Farm visit and travel to Landshut

YOUNG BREEDERS' PROGRAMME

Also young breeders are cordially invited to attend the Congress. There will be a special programme for them with exciting events like a young breeders' competition and party on Friday 21.09 at Mühldorf and field trips in Upper Bavaria on Saturday 22.09.

PROGRAM SUBJECT TO CHANGE

"Science Corner"

Crossing Improvement Effect of Fleckvieh Cattle in Zunyi/China

XU Jian-zhong¹, LIU Zhen-de², HE Cheng-long³ (1. Guizhou Livestock and Poultry Improvement Station, Zunyi, Guizhou 563000;2.Livestock and Poultry Improvement Station in Zunyi City, Zunyi, Guizhou 563000;3.Livestock and Poultry Improvement Station in Zunyi County, Zuiyi, Guizhou 563000)

Objective: To study the growth and beef performance of Fleckvieh crossbreed in Zunyi.

Method: Thirty crossbreeds, the F1 of Fleckvieh and Zunyi indigenous yellow cattle and hybrids of Fleckvieh and Simmental crossed with indigenous yellow cattle, were randomly selected as the test group, and 30 local purebred cattle were as the control to feed and carry out fattening experiment.

Result: The results showed that the body weight of the crossbreed of Fleckvieh and local cattle, Fleckvieh, Simmental and local cattle was 90.00 kg and 118.18 kg at six months old, while that of local cattle was 71.87 kg. Compared with the control, it increased 25.2% and 64.43%. The body height and chest circumstance increased 29.67%, 21.63% and 30.59% 19.83%, respectively. The difference was significant(P<0.01). After fattening, two eighteen-month old hybrids were slaughtered from Fleckvieh and local cattle, Fleckvieh, Simmental and local cattle. The slaughter rate and net meat percentage was 58.12%, 53.71% and 45.67%, 38.90%. Compared with the same age local cattle, the slaughter rate and net meat percentage improved 10.2%, 5.61% and 6.95%, 0.18%, respectively.

Conclusion: The body size, body weight and slaughter performance of the offspring increased and improved, the improve-

ment effect was significant.

Comparative Test of Slaughter Trait of Mongolian Cattle and F₂ generation from Simmental and Mongolian Cattle

Si Qin Ba Te-er¹, Bi Li Ge Ba Te-er¹, Li Yong-lin², XIN Man-xi¹, Ji Hu Lan Tu², BAI Tao¹, Li Li-hua¹, HAN Chun-me¹ (1. Animal Husbandry Working Station of Xi lin Gol league in Inner Mongolia Autonomous Region, Xi lin Hao Te, Inner Mongolia 026000;2. Animal Husbandry Working Station of Zheng Xiang Bai Qi of Xi lin Gol league in Inner Mongolia Autonomous Region, Zheng Xiang Bai Qi, Inner Mongolia 013800)

Objective: In this paper, the meat production performance effect of crossbreeding Simmental and Mongolian cattle was analyzed.

Method: Comparative slaughter test was carried between Mongolian sire and F₂hybrids from Simmental and Mongolian cattle with 18 months old.

Result: Compared with the same age Mongolian sire, the average live weight, carcass weight and net meat weight of F₂generation with 18-month age from Simmental and Mongolian cattle increased 61.86%, 70.16% and 74.95%. The difference was significant(P<0.01), while the average dressing percentage and net meat rate of F₂hybrids improved 5.14% and 8.12%. The difference of average dressing percentage was significant(P<0.05).

Conclusion: The improvement result of Mongolian cattle was obvious by using Simmental to improve the meat production performance.

Somatic Cell Count in Simmental Breed Cows Milk from Family Farms according to the Order of Lactation and Lactation Stages

P. Mijić, T. Bobić, I. Knežević, I. Klarić, M. Sakač, T. Koturić, V. Bogdanović

Abstract: Simmental breed cows although being dominant breed at the family farms in Croatia are not yet sufficiently adapted to the machine milking due to their improper udder index. The aim of this study was to determine the somatic cells count in Simmental cows' milk according to the order of lactation and lactation stages. Survey has been conducted at four family farms and a total of 61 cow of Simmental breed from first to third lactation were enrolled in a study. The study results have shown that the maximum somatic cell count is in milk ($LSCC=3.59$) from the stables with have a downward floor, but not significantly higher in comparison to other ways of keeping the cows. However, the lowest udder hygiene was in the stables where the milking was performing by putting the milk into the cans and where cows were kept on the embroidery. The significant increase in $LSCC$ ($P<0.05$) was determined in the third lactation in comparison to the second lactation. Given the stage of lactation largest LBSS was found in the second stage, which was significantly higher when compared to the first. Farms with a free way of keeping cows and milking cows in parlours are becoming more and more like guidelines in current milk production, and animals that reside in those farms have healthier udders and less micro-organisms in milk.

Conclusion: Based on this study, we have concluded that in Simmental cows largest $LSCC$ is in the stables that have downward floor, but not significantly in comparison to other ways of keeping cows. However, the lowest udder hygiene was found in the stables where milking was performed by putting the milk into the cans and where cows were kept on the embroidery. The $LSCC$ was significantly higher ($P<0.05$) in the third compared to the other lactation, as well as the number of microorganisms in the third compared to the first lactation. Given the stage of lactation the largest $LSCC$ was found in the

second stage, which was significantly higher compared to the first stage. Farm with a free way of keeping cows and milking in parlours are becoming more and more like a guidelines in current milk production, and animals that reside in those farms have a healthier udders and less micro-organisms in milk. This is shown in this study on Simmental breed cows which is the dominant cow breed at the family farms in Croatia.

Genetic trends for production and nonproduction traits in Simmental breed in Slovenia

K. Potočnik, M. Štepec, J. Krsnik

Abstract: The main part of Slovenian Simmental breed is selected for milk production. Genetic changes in a population should be checked in the case of selection on more traits at the same time. The estimation of genetic trend is the best tool to follow genetic changes in a population. In this paper we present the estimated genetic trends for traits with high economic weight in total selection of Slovenian Simmental breed. Results show that the greatest genetic progress was attained for milk production trait and conformation traits for udder. In other traits not so high genetic progress was attained. In the case of muscularity significant negative genetic progress was attained in the last 12 years.

Conclusion: The studied part of Simmental cattle in Slovenia presents almost half of dairy cows population. The selection is oriented to the production of healthy, durable cows with good udders. Estimation of genetic progress in the last 14 years shows that the selection advanced in the right direction. The greatest progress was attained in milk production and udder traits. The general and most important picture of successful selection is the progress of total merit index for milk production. Here, in the analysed period, progress for almost one standard deviation was achieved.
